INMCA 301	MATHEMATICS FOR COMPUTER APPLICATIONS	3-1-0-4	2016

Course Objectives

This course aims to give a basic understanding of different mathematical concepts and techniques used in computer applications.

Syllabus

Matrix operations, Solution of linear equations, Eigenvalues and Eigenvectors, Group theory, Lattices and Boolean algebra, Simulation, Fuzzy Sets, Fuzzy Logic.

Expected Outcome

At the end of the course, students would be able to

- solve any given system of linear equations;
- find the Eigenvalues and Eigenvectors of a matrix;
- solve problems using algebraic structures;
- familiar with Lattices and Boolean algebra;
- simulate the operation of a dynamic system and make improvement according to the simulation results;
- use the concepts of Fuzzy Sets and Fuzzy Logic;

Course Plan			
Module	Contents	Hours	End Sem. Exam. Mark
I	System of Linear Equations: Linear System of Equations, Elementary row operations, Row Echelon form, Linear independence, Rank of a matrix, Solution of Linear Systems by Gauss Elimination Method, Homogeneous Linear Systems. [Ref 2 - 7.3 – 7.5]	9	15%
II	Matrix Eigenvalue Problem : Eigenvalues and Eigenvectors, Cayley Hamilton Theorem, Diagonalization of a matrix, Quadratic forms- Principal axis theorem(without proof) [Ref 2 – 8.1, 8.3 & 8.4]	9	15%
FIRST INTERNAL EXAMINATION			
III	Group Theory: Groups, Definition and elementary properties, Subgroups, Homomorphism and Isomorphism, Generators - Cyclic Groups, Cosets and Lagrange's Theorem. Algebraic systems with two binary operations- Rings, Fields-Sub rings, Ring Homomorphism.[Ref 3 – 3.5]	10	20%
IV	Lattices and Boolean algebra: Lattices –Sub lattices – Complete lattices – Bounded Lattices - Complemented Lattices – Distributive Lattices – Lattice Homomorphisms. Boolean algebra – Sub algebra, Direct product and Homomorphisms. [Ref 3 – 4.1, 4.2]	9	15%
SECOND INTERNAL EXAMINATION			
V	Simulation: Simulation concepts, Simulation of a Queuing system using event list, Pseudo-Random Numbers, basic ideas of Monte-Carlo simulation, Simulation of Inventory System. [Ref 6 – 16.1 - 16.5]	10	20%
VI	Fuzzy Sets and Fuzzy Logic: Introduction to classical sets - properties, Operations and relations; Fuzzy sets, Membership, Uncertainty, Operations and properties, Fuzzy relations, Cardinalities, Membership functions. Fuzzification, Defuzzification methods, Membership value assignment, Development of rule base and decision making	9	15%

	system, Defuzzification to Crisp sets. [Ref 7 – Relevant sections of Chapter 2, 3, 4]		
END SEMESTER EXAMINATION			
Proofs of theorems and properties are not required.			
QUESTION PAPER PATTERN			
<p>There will be two parts in the Question paper - Part A and Part B.</p> <p>Part A will have 8 short answer questions of 3 marks each (8 X 3 M = 24 M). There will be no choice questions.</p> <p>Part B will have 6 essay questions one from each module of 6 marks each, with an alternative choice question from the same module (6 x 6M=36M). The maximum number of sub part questions in Part B to be limited to 2.</p> <p>The total marks assigned to questions in Part A (Short answer) and Part B (Essay) together from a single module will not exceed the marks assigned to that module specified in the course plan in the syllabus.</p>

Course Plan			
Module	Contents	Hours	End Sem. Exam. Mark
I	Fundamentals of E-Commerce: Origin and development, Definitions, Advantages of e-commerce as compared with traditional system of commerce, The Impact of Computer Science upon the E-commerce, Impact of Communications Science upon the E-commerce, The Impact of Management Science upon E-commerce, Constitution of E-Commerce. [Ref 5] Auctions in E-commerce, types of auctions. [Ref 1], EDI- Definition & Applications, Advantages of EDI.[Ref 4]	9	15%
II	Categories of E-Commerce: business-to-business (B2B), business-to-consumer (B2C), business-to-government (B2G), government-to-government (G2G), consumer-to-consumer (C2C), M-Commerce. [Ref 5]	10	20%
FIRST INTERNAL EXAMINATION			
III	E-Commerce Architecture and System Design: E-commerce Architecture, E-commerce Security System, E-commerce Payment System, Architecture and Design Method of E-commerce Application System Software. [Ref 5]	10	20%
IV	Payment Technologies for E-Commerce: Online Bank, E-Payment Tools. [Ref 5], e-CRM:CRM, what is e-CRM, it's Applications[Ref 6]	9	15%
SECOND INTERNAL EXAMINATION			
V	Security Technologies in E-Commerce: Introduction to Security Problems in E-commerce, Reliability of E-commerce System, Hacking, Spoofing, Sniffing, Phishing, Denial of Service (DoS) attacks, Secure Payment Technology. [Ref 5]	9	15%
VI	E-Commerce and Law: The legal Problems in the Electronic Fund Transfer, Legal Problems Brought forth by Domain Names, Legal Systems Concerning the E-commerce Security, Legal Responsibilities for the Violation of E-commerce Security Laws, Consumer Rights Protection in E-commerce. [Ref 5]	9	15%

END SEMESTER EXAMINATION**QUESTION PAPER PATTERN**

There will be two parts in the Question paper - **Part A and Part B.**

Part A will have 8 short answer questions of 3 marks each ($8 \times 3 \text{ M} = 24 \text{ M}$). There will be no choice questions.

Part B will have 6 essay questions one from each module of 6 marks each, with an alternative choice question from the same module ($6 \times 6\text{M}=36\text{M}$). The maximum number of sub part questions in Part B to be limited to 2.

The total marks assigned to questions in Part A (Short answer) and Part B (Essay) together from a single module will not exceed the marks assigned to that module specified in the course plan in the syllabus.

Course Code	Course Name	L-T-P-Credits	Year of Introduction
INMCA 305	INTRODUCTION TO RDBMS AND SQL	3-1-0-4	2016
Course Objectives This course aims to provide an overview of the architecture, functions, and benefits of a relational database management system along with SQL and introduction to transaction processing.			
Syllabus Conventional file processing System, Structure of DBMS, Attributes, Entities, Entity Relationship Diagram (ERD), Relational algebra, Normal Forms, Structured Query Language, Introduction to PL/SQL, Transaction processing, Concurrency Control, Database Security and Authorization.			
Expected Outcome At the end of the course, students would be able to: <ul style="list-style-type: none"> • understand the fundamentals of relational database systems including: data models, database architectures, and database manipulations; • understand the theories and techniques in developing database applications and be able to demonstrate the ability to build databases using enterprise DBMS products such as MySQL, MariaDB, Oracle or MsSQL; • understand new developments and trends in databases;

QUESTION PAPER PATTERN			
There will be two parts in the Question paper - Part A and Part B.			
Part A will have 8 short answer questions of 3 marks each (8 X 3 M = 24 M). There will be no choice			

questions.

Part B will have 6 essay questions one from each module of 6 marks each, with an alternative choice question from the same module (6 x 6M=36M). The maximum number of sub part questions in Part B to be limited to 2.

The total marks assigned to questions in Part A (Short answer) and Part B (Essay) together from a single module will not exceed the marks assigned to that module specified in the course plan in the syllabus.

Course No.	Course Name	L-T-P Credits	Year of Introduction
INMCA 309	INTRODUCTION TO OPERATIONS RESEARCH	4-0-0-4	2016

Course Objectives

- To introduce Operations Research as a tool used to solve decision making problems in a wide range of areas.
- To impart different modeling techniques of real world problems and the various optimization techniques for solving these models.

Syllabus

Linear Programming model and various methods for solving the models- The transportation and assignment problems - Probabilistic models -game theory and queuing theory. Simulation models -the virtual running of a real world problem.

Expected Outcome

The students would be able to

- Construct a mathematical model of a real world problem which has many alternative solutions which makes the decision maker unable to take a decision;
- Learn about various optimization methods that are employed to solve these mathematical models to find a solution which is in the best interest of the decision maker;

III	Design: Software Design Definition, Design Concepts, Coupling, Types of Coupling, Cohesion, Types of Cohesion Software Architecture, Architectural Styles, User Interface Design- Golden Rules, The process of interface design, Interface Analysis. [Ref 3]	9	15%
IV	Software Quality: Software Quality-Garvin's Quality Dimensions, Review Techniques-Defect Amplification and Removal, Informal and Formal Reviews. Software Quality Assurance (SQA)- Elements, Task, Software Reliability. [Ref 3]	8	15%
V	Software Testing: Definition, Test characteristics, Test Plan, Test Cases, Types of testing, Black-Box Testing, White-Box Testing, Stress Testing, Performance Testing, [Ref 3] Introduction to Automation Testing. [Ref 5]	10	20%
SECOND INTERNAL EXAMINATION			
VI	Maintenance and Reengineering: Software Maintenance, Software Supportability, Challenges of maintenance phase, Reengineering, Business Process Reengineering, Software Reengineering, Reverse Engineering, Restructuring, Forward Engineering. [Ref 3]	9	15%

END SEMESTER EXAMINATION**QUESTION PAPER PATTERN**

There will be two parts in the Question paper - **Part A and Part B.**

Part A will have 8 short answer questions of 3 marks each ($8 \times 3 \text{ M} = 24 \text{ M}$). There will be no choice questions.

Part B will have 6 essay questions one from each module of 6 marks each, with an alternative choice question from the same module ($6 \times 6\text{M}=36\text{M}$). The maximum number of sub part questions in **Part B** to be limited to 2.

The total marks assigned to questions in Part A (Short answer) and Part B (Essay) together from a single module will not exceed the marks assigned to that module specified in the course plan in the syllabus.

2014

Course Code	Course Name	L-T-P-Credits	Year of Introduction
INMCA 304	NUMERICAL METHODS	3-1-0-4	2016
Course Objectives This course aims to give a basic understanding of computer based numerical methods.			
Syllabus Numerical solution of Linear and Non-Linear equations, Curve Fitting, Numerical integration and differentiation, Numerical solution of differential equation.			
Expected Outcome At the end of the course, students would be able to <ul style="list-style-type: none"> • Solve equations and find eigenvectors numerically; • Fit the best curve using experimental observations; • Understand the concepts of Interpolation; • Calculate a differential coefficient or a definite integral using an appropriate numerical method; • Solve an ordinary differential equation using an appropriate numerical method; • Solve partial differential equation;

Course Plan			
Module	Contents	Hours	End Sem. Exam. Marks
I	Solution of equations, Eigenvalue and Eigenvector: Non-Linear: Bisection method, Fixed point iteration, Regula Falsi method, Newton- Raphson Method. Linear: Gauss-Seidel method, Jacobi Iteration method, Eigenvalues and Eigenvectors of a matrix by power method. [Ref 1 Sections 2.1,2.5,2.7-2.9,2.11(Aitken's method not required),2.12,2.13,3.5,4.11]	10	15%
II	Curve Fitting: Introduction, Least Square Method, Fitting Linear Equations, Fitting second degree polynomial function. [Ref 1 Sections 5.1,5.4-5.6]	9	15%
FIRST INTERNAL EXAMINATION			
III	Interpolation and Approximation: Newton's forward and backward Interpolation for equal intervals, Lagrange's and Newton's Interpolation for unequal Intervals, Gauss's Interpolation formula. [Ref 1 Sections 6.1.6.2,7.1-7.3,7.5,7.6,7.11- 7.14]	9	15%
IV	Differentiation and Integration: Differentiation using interpolation formulae –Numerical integration by trapezoidal and Simpson's 1/3 and 3/8 rules, Romberg's Integration. [Ref 1 Sections 8.1,8.2,8.4,8.5,8.7]	9	15%
V	Ordinary Differential Equations: Single step methods: Taylor series method, Euler method, Fourth order Runge – Kutta method. Multistep methods: Milne's and Adam's predictor and corrector method. [Ref 1 Sections 10.1,10.3,10.4,10.9,10.10]	10	20%
SECOND INTERNAL EXAMINATION			
VI	Partial Differential Equations: Finite difference solution of second order partial differential equation, Finite difference solution of one dimensional heat equation by explicit and implicit methods, One dimensional wave equation and two dimensional Laplace equation. [Ref 1 Sections 11.1,11.3,11.5,11.9,11.10,11.12]	9	20%
END SEMESTER EXAMINATION			

Proofs of theorems and properties are not required.

QUESTION PAPER PATTERN

There will be two parts in the Question paper - **Part A and Part B.**

Part A will have 8 short answer questions of 3 marks each ($8 \times 3 \text{ M} = 24 \text{ M}$). There will be no choice questions.

Part B will have 6 essay questions one from each module of 6 marks each, with an alternative choice question from the same module ($6 \times 6\text{M}=36\text{M}$). The maximum number of sub part questions in **Part B** to be limited to 2.

The total marks assigned to questions in Part A (Short answer) and Part B (Essay) together from a single module will not exceed the marks assigned to that module specified in the course plan in the syllabus.

KTUNOTES.IN

Course Code	Course Name	L-T-P-Credits	Year of Introduction
INMCA 306	COMPUTATIONAL SUSTAINABILITY	3-1-0-4	2016
Course Objectives <ul style="list-style-type: none"> To have an increased awareness among students on issues in areas of sustainability To understand the role of technology within sustainable development. To know the methods, tools and incentives for sustainable product-service system development. To establish a clear understanding of the role and impact of various aspects of technological decisions on environmental, societal and economic problems. 			
Syllabus Sustainability – need and concept, challenges, Environment acts and protocols, global, regional and local environment issues. Natural resources and their pollution, carbon credits, zero waste concept. ISO 14000, Life Cycle Analysis, Environmental Impact Assessment studies, sustainable habitat, green buildings, green materials, Energy – conventional and renewable sources. Technology and sustainable development, sustainable urbanization. Industrial Ecology.			
Expected Outcome The student would be <ul style="list-style-type: none"> Able to understand the different types of environmental pollution problems and their sustainable solutions; Able to work in the area of sustainability for research and education; Having a broader perspective in thinking for sustainable practices by utilizing the knowledge and principles gained from this course; 			
References <ol style="list-style-type: none"> David T. Allen, David R. Shonnard, “Sustainable Engineering – Concepts, Design and Case Studies”, Pearson Education, Prentice Hall, First Edition, 2012. Dr. Swarnalatha K, Dr. Binu Sara Mathew, “Sustainable Engineering”, Orbit Publishers and Distributors, August, 2015. Shibu Krishnan, “Introduction to Sustainable Engineering”, PKC Books, First Edition, 2015.

- Sustainability in Everyday Life - <https://www.edx.org/course/sustainability-everyday-life-chalmersx-chm002x-0>

Course Plan			
Module	Contents	Hours	End Sem. Exam. Marks
I	Sustainability: Introduction, Need and Concept of Sustainability Science; Social, Environmental and Economic Sustainability Concepts; Goals of Sustainability; [Ref 2] Challenges for Sustainable Development; [Ref 3,2] Nexus between Technology and Sustainable development; [Ref 3,2] Multilateral Environmental Agreements and Protocols; Clean Development Mechanism (CDM); Environmental legislations in India - Water Act, Air Act. [Ref 3,2]	10	15%
	Students may be assigned to do at least one project eg: a) Identifying/assessment of sustainability in your neighborhood in education, housing, water resources, energy resources, food supplies, land use, environmental protection etc. b) Identify the threads for sustainability in any selected area and explore solutions for the same.		
II	Environmental Issues : Air Pollutions – Sources and Types; Effects of Air Pollution; Control measures to reduce air pollution; Water pollution – Sources, Water Pollutants and its effects; Sustainable wastewater treatment; Solid waste – Sources, Impacts of solid waste; Zero Waste Concept; 3 R Concept of Waste Management; Global environmental issues- Resource Degradation, Climate Change, Global Warming, Ozone Layer Depletion; Regional and Local Environmental Issues; Carbon Credits and Carbon Trading; Carbon foot print. [Ref 3]	10	20%
	Students may be assigned to do at least one project for eg: a) Assessing the pollution status of a small area b) Programmes for enhancing public environmental awareness c) Observe a pond nearby and think about the different measures that can be adopted for its conservation		
FIRST INTERNAL EXAMINATION			

III	Environmental Management Tools: Environmental Management System and Standards; ISO 14000 series; Life Cycle Analysis (LCA) – Goal and Scope; Biomimicking; Environment Impact Assessment (EIA) - Procedures of EIA in India. [Ref 3]	9	15%
	Students may be assigned to do at least one project eg: <ul style="list-style-type: none"> a) Conducting LCA of products (eg. Aluminum cans, PVA bottles, cars etc. or activities (Comparison of land filling and open burning) b) Conducting an EIA study of a small project (eg. Construction of a building / E-waste management.) 		
IV	Sustainable Engineering: Basic Concepts of sustainable habitat; Green Buildings, Green Materials for building construction, Material Selection for Sustainable design; Green Building Certification; Methods for increasing energy efficiency of buildings; Sustainable Cities; Sustainable Transport; Sustainable Pavements. [Ref 3]	10	20%
	Students may be assigned to do at least one project eg: <ul style="list-style-type: none"> a) Consider the design aspects of a sustainable building for your campus / sustainable computer lab design. b) Explore the different methods that can be adopted for maintaining a sustainable computer lab in your campus. 		
V	Energy sources: Basic Concepts; Conventional and Non-Conventional sources of energy - Solar energy, Fuel cells, Wind energy, Hydro- electric power - Small hydro plants, Biofuels, Energy derived from oceans, Geothermal energy; Energy Conservation. [Ref 3]	9	15%
	Students may be assigned to do at least one project eg: <ul style="list-style-type: none"> a) Find out the energy savings that can be achieved by the installation of a solar panel for your computer lab. b) Conduct a survey on E-waste management in schools and colleges of Kerala. 		
SECOND INTERNAL EXAMINATION			
VI	Applications of Sustainability: Green Engineering; Sustainable Urbanization; Sustainability Industrialization and Poverty	8	15%

	Reduction; Social and Technological Change for Sustainability; Sustainable Industrial Processes - Material selection; Pollution Prevention; Industrial Ecology; Industrial Symbiosis. [Ref 3]		
	<p>Students may be assigned to do at least one project eg:</p> <ol style="list-style-type: none"> Collect details for instances of climate change in your locality Find out the carbon credits you can gain by using a sustainable transport system (travelling in a cycle or carpooling from college to home) Have a debate on the topics like: Industrial Ecology is a Boon or Bane for Industries? /Are we scaring the people on Climate Change unnecessarily? /Technology enables Development sustainable or the root cause of unsustainability. 		

END SEMESTER EXAMINATION

QUESTION PAPER PATTERN

There will be two parts in the Question paper - **Part A and Part B.**

Part A will have 8 short answer questions of 3 marks each (8 X 3 M = 24 M). There will be no choice questions.

Part B will have 6 essay questions one from each module of 6 marks each, with an alternative choice question from the same module (6 x 6M=36M). The maximum number of sub part questions in **Part B** to be limited to 2.

The total marks assigned to questions in Part A (Short answer) and Part B (Essay) together from a single module will not exceed the marks assigned to that module specified in the course plan in the syllabus.

Course Code	Course Name	L-T-P-Credits	Year of Introduction
INMCA 308	OPEN SOURCE PLATFORMS	3-1-0-4	2016
Course Objectives This course aims to give a basic understanding of open source platforms to the students, along with various technologies in practice.			
Syllabus Definition, specialities of open source platforms, concepts, standards. Learning programming languages like python, content management software, and open source tools.			
Expected Outcome At the end of the course, students would be <ul style="list-style-type: none"> Exposed to the context and operation of free and open source software (FOSS) communities and associated software projects; Able to learn open source languages;

Course Plan			
Module	Contents	Hours	End Sem. Exam. Marks
I	Introduction. Need for OOP paradigm, Procedural approach vs. Object-Oriented approach. Object Oriented concepts Java Basics: History of Java, Java features, data types, variables, operators, expressions, control statements, type conversion and casting, Concepts of - classes, objects, constructors, Access Specifiers (public, private, protected, friendly), Access Modifiers (static, final, abstract, native, synchronized), overloading methods, recursion, nested and inner classes. [Ref 3]	9	15%
II	Inheritance: Generalizations vs. Specialization, Inheriting data members and methods, Single and Multilevel inheritance, use of super and this keywords. Polymorphism- method overriding, dynamic method dispatch, abstract and final classes. [Ref 3]	10	20%
FIRST INTERNAL EXAMINATION			
III	Arrays and Strings: One dimensional arrays, Multidimensional arrays, exploring String class and methods, String Buffer class. Interface: creation and implementation of an Interface. Packages - creating and accessing a package, importing packages, creating user defined packages. [Ref 3]	11	20%
IV	Exception Handling: benefits of exception handling, exception hierarchy, usage of try, catch, throw, throws and finally, built-in exceptions, creating own exception sub classes. [Ref 3] Multithreaded Programming: thread life cycle, creating threads, thread priorities, synchronizing threads, Inter Thread Communication. [Ref 3]	9	15%
V	Working with I/O: Exploring Java I/O, Streams, Byte Streams, Character Streams, Random Access Files. [Ref 3]	9	15%
SECOND INTERNAL EXAMINATION			
VI	Applets – Applets and Applications, life cycle of an applet, passing parameters to an applet, HTML tags.	8	15%

	Working with Graphics, Colors. Networking: client-server model, Sockets, InetAddress, TCP sockets - ServerSocket and Socket classes, UDP Sockets – DatagramSocket, DatagramPackets.		
END SEMESTER EXAMINATION			
QUESTION PAPER PATTERN
